2016 年 5 月 27 日 Bangalore ( 印度班加罗尔 ) 考场 CCIE LAB 战报分享 :

**Q1: add vlan on switch**

**Q2: R17 of S4 / 0 interface is not configured: ppp ipcp route default**

**Q3: Error on R22 OSPF router-id configuration**

**Q4: R12 of E1 / 0 interface is configured with a passive interface**

**Q5: R5 for IBGP neighbor using peer-group mode configuration, But for peer-group group made a route-map Next-hop set next-hop 134.56.78.45 to this address**

**R1 is E0 / 0 interface is not configured with mpls ip**

**Q6: On the pre-configuring under the BGP process R22 and R25 of the ipv4 address family using IPV6 address to establish neighbor**

**Originally I thought this is wrong! And went on to modify both Routers under IPV6 address- family**

**I discovered BGP neighbor is still not yet ESTABLISHED. This time I examined closely and found out IPV6 traffic-filter**
